

1 in 141 babies die in the U.S. each year.

Source: Centers for Disease Control and Prevention, 2003

The R Baby Foundation was born to save babies' lives.

Rebecca Ava died at 9 days old. Misdiagnosed as having a common cold, she actually contracted a serious viral infection. Had this virus been detected, she could still be here today. Rebecca was 1 in 141, and one of nearly 30,000 babies who die in the U.S. each year. A newborn dying within the first 28 days of life, her death was twice as likely as older babies'. Rebecca's death gave R Baby life.

We improve medical care for infants. And we help other newborns get their chance at life.
